Voice-enabled productivity for clinicians.

What's new in Dragon Dictate Medical for Mac, version 4.

A flexible speech recognition solution that enables the clinician to quickly capture comprehensive clinical documentation while spending more time on what matters – their patients. Dragon Dictate Medical for Mac streamlines documentation workflow by allowing clinicians to dictate appointment and medical record notes directly into their EHR.

Support for OS X® Yosemite (10.10)
– In addition to OS X Mavericks (10.9)

More accurate and faster
– Higher performance with drastically reduced latency and faster editing with pure 64-bit application and improved memory management capabilities

– Improved accuracy over version 3, with optimisations for latest speech recognition technology

Updated medical vocabularies
– Better performance and improved recognition and accuracy for over 50 medical specialties

– New Support for "General English" vocabulary

– "General English" profile can be created for greater accuracy when dictating outside of medical work, such as for personal use

More control within applications
– Compose and reply to emails in Gmail™ using full text controls, doing dictation and editing natively without having to transfer any text

– In Safari® and Firefox®, use voice commands to control your Gmail inbox, giving you even more voice capability within popular applications

– Use your voice to click on any visible link

– User your voice to open emails

Powerful transcription of recordings into text
– Accurately transcribe a pre-recorded audio file or podcast of a single speaker's voice with the same accuracy for medical terminology as transcribing your own voice recording

NUANCE

- Only a 90-second audio clip is required to create a profile for the speaker

- Support of voice files in many different formats, including .mp3 audio files

  - In addition to .aif .aiff .wav .mp4 .m4a .m4v

- Great for transcribing a colleague's prerecorded medical notes, medical podcasts from the Internet, or for medical assistants to transcribe each clinicians' recorded notes

- Multiple voice capture and dictation sources are allowed per profile so the clinician can easily manage recordings in varying environments using their profile and customisations
